

Addition

Key language which should be used: sum, total, parts and wholes, plus, add, altogether, more than, 'is equal to' 'is the same as', bridging and partitioning.

Concrete	Pictorial	Abstract
<p>Combining two parts to make a whole Use a range of resources e.g. counters, shells, teddies, <u>numicon</u> etc</p> 	<p>Children to represent the cubes using dots or crosses. They could put each part on a part whole model too.</p> 	<p>$4 + 3 = 7$ four is a part, three is a part and the whole is seven</p> 
<p>Counting on using number lines Use cubes and numicon etc.</p>  	<p>Drawing jumps on a number line</p>  <p>Using a bar model</p> 	<p>The abstract number line: What is two more than four? What is the sum of four and two? What is the total of four and two? $4 + 2$</p> 

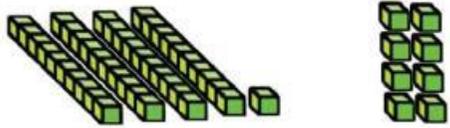

<p>Regrouping to make 10 Use ten frames and counters/cubes and numicon</p> <p>6 + 5</p> 	<p>Use the ten frame stamp and draw counters or drawings in 10 frame arrangements</p> 	<p>Children to show how they can make 10 by splitting the number</p>  <p>11</p> <p>6 + 5 =</p> <p>4 1</p> <p>Children develop an understanding of equality eg. $6 + \square = 11$ $6 + 5 = 5 + \square$ $6 + 5 = \square + 4$</p>
<p>Adding 3 single digit numbers Use counters, numicon, cubes, tens frames</p>	<p>Represent the concrete using symbols eg. circles, dots, squares.</p>	<p>Look for number bonds or doubles first.</p> <p>$3 + 5 + 7 = 10 + 5 = 15$ $4 + 3 + 4 = 8 + 3 = 11$</p>

2 digit + 1 digit

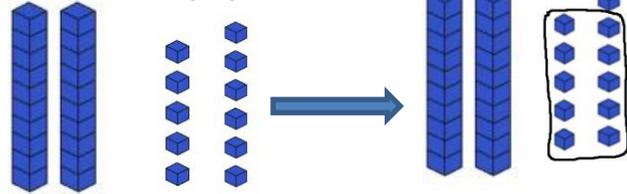

TO + O

Continue to develop understanding of partitioning and place value

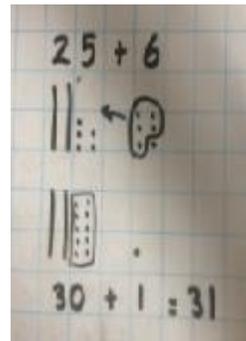

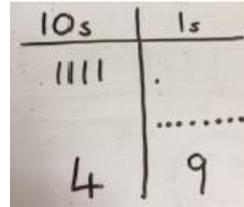

41+8 (no bridging)

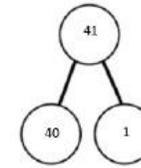

25 + 6 (bridging)

Children to represent the concrete using symbols e.g. lines for 10s and dots/crosses/circles for ones.

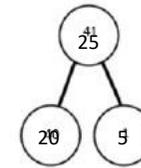

41 + 8 (no bridging)

1 + 8 = 9

40 + 9 = 49

25 + 6 (bridging)

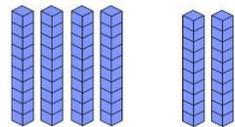

5 + 6 = 11

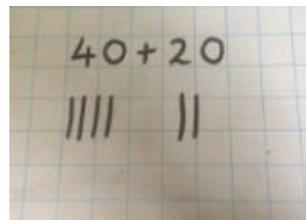

20 + 11 = 31

Tens + Tens

Continue to develop understanding of place value and use this to support addition 40 + 20

Children to represent the concrete using symbols e.g. lines for 10s

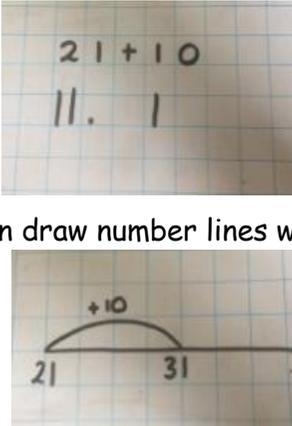

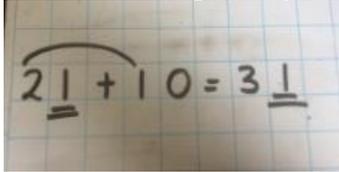

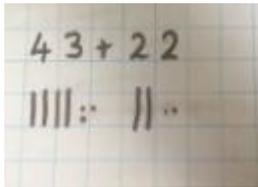

40 + 20

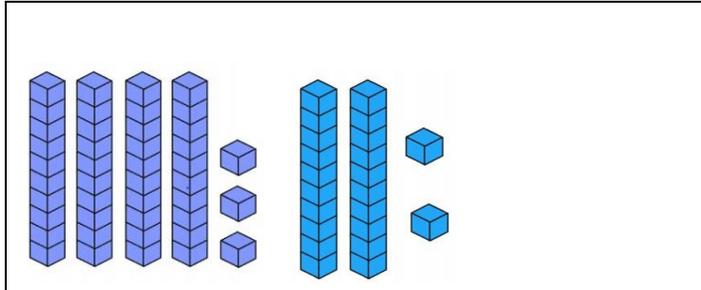

Count on in tens

Use fluency facts

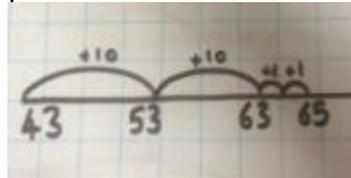

"I know that 4 + 2 = 6, so I know that 40 + 20 = 60"

4 + 2 = 6 so 40 + 20 = 60

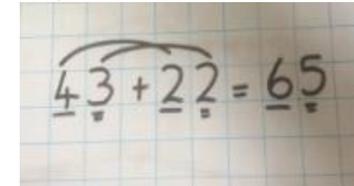

<p>TO + Ts Continue to develop understanding of partitioning and place value and use this to support addition</p> <p>21 + 10</p> 	<p>Children to represent the concrete using symbols e.g. lines for 10s and dots/crosses/circles for ones.</p>  <p>Children can draw number lines with jumps of 10.</p>	<p>21 + 10</p> <p>Mental strategies: Counting on in 10s</p> <p>Add the 10s, the ones digit stays the same</p> 
<p>2 digit + 2 digit TO + TO begin with no bridging</p> <p>Continue to develop understanding of partitioning and place value and use this to support addition use base 10, numicon and money</p> <p>43 + 22</p>	<p>Children to represent the concrete using symbols e.g. lines for 10s and dots/crosses/circles for ones.</p> 	<p>43 + 22</p> <p>Partitioning, add the tens and add the units</p> <p>40 + 20 = 60</p> <p>3 + 2 = 5</p> <p>} 60 + 5 = 65</p>

Children can draw number lines with jumps of 10 and jumps of 1

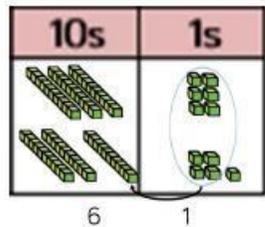

Partition across the number sentence ('eyebrows') - add the tens then add the ones

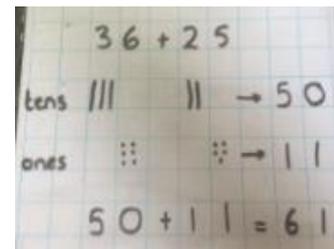

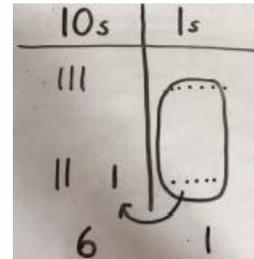

2 digit + 2 digit TO + TO bridging 10

Continue to develop understanding of partitioning and place value and use this to support addition use base 10, numicon and money

36 + 25

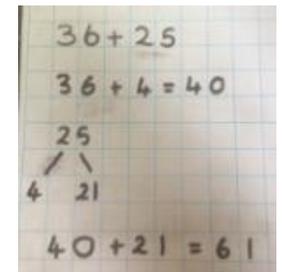

This could be done one of two ways:

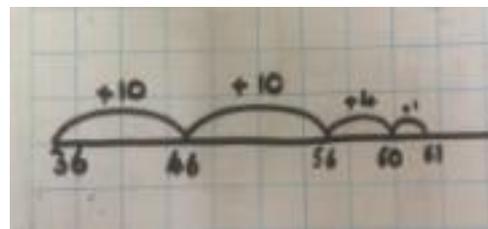

partitioning:
 $30 + 20 = 50$
 $6 + 5 = 11$
 $50 + 11 = 61$

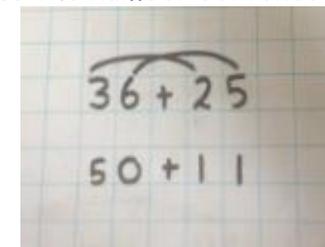

Using number bonds and partitioning, looking for ways to make 10:

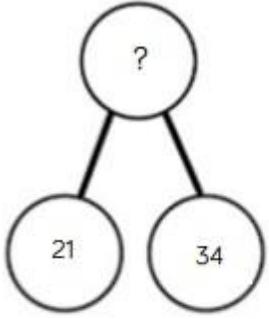

Children could also draw a number line: Adding tens and partitioning the units to make the next tens number

Partition across the number sentence ('eyebrows')

Conceptual variation; different ways to ask children to solve 21 + 34

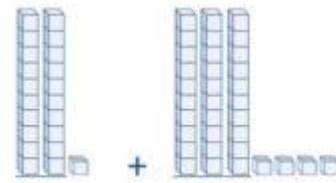

?	
21	34

Word problems:
 In year 1 there are 21 boys and 34 girls.
 How many children are there in total?

 21 + 34 = 55 . Prove it

21 + 34 = = 21 + 34

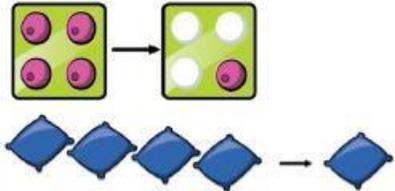

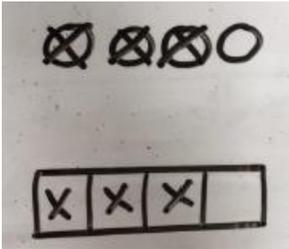

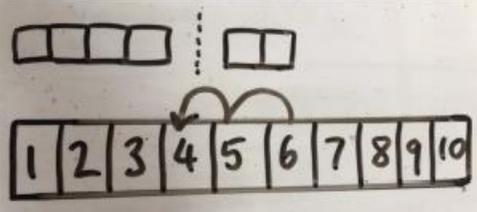

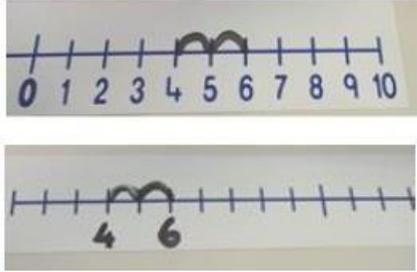

Calculate the sum of twenty-one and thirty-four

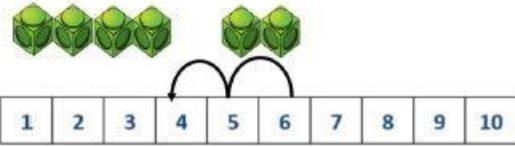

Missing digit problems
 21 + 3 __ = __ 5

Subtraction

Key language which should be used: take away, less than, the difference, subtract, minus, fewer, decrease, bridging.

<u>Concrete</u>	<u>Pictorial</u>	<u>Abstract</u>
<p>Physically taking away and removing objects from a whole Use ten frames, numicon, cubes, and other items such as bean bags</p> <p>$4 - 3 = 1$</p>  <p>The diagram shows a ten frame with 4 pink circles, which is then shown with 3 circles removed, leaving 1. Below it, four blue diamonds are shown, with three being crossed out and one remaining.</p>	<p>Children to draw the concrete resources they are using and cross out the correct amount. The bar model can also be used.</p>  <p>The diagram shows four circles, three of which are crossed out with an 'X'. Below it is a bar model with four boxes, the first three containing an 'X' and the last one empty.</p>	<p>$4 - 3 =$</p> <p>$\square = 4 - 3$</p> <p>$4 - \square = 3$</p> <p>$\square - 3 = 1$</p>  <p>The diagram shows a bar model with a total of 4, divided into 3 and a question mark. To the right is a number bond with 4 at the top, and a question mark and 3 at the bottom.</p>
<p>Counting back Use number lines or number tracks</p> <p>$6 - 2 = 4$</p>	<p>Children to represent what they see pictorially e.g.</p>  <p>The diagram shows a number track from 1 to 10. A vertical dashed line is drawn between 3 and 4. Above the track, two boxes are drawn, representing the subtraction of 2 from 6. An arrow on the track shows a jump back from 6 to 4.</p>	<p>Children to represent the calculation on a number line or number track and show their jumps. Encourage children to use an empty number line.</p>  <p>The diagram shows two number lines. The top one is a full number line from 0 to 10 with a jump from 6 to 4. The bottom one is a partial number line with a jump from 6 to 4.</p>

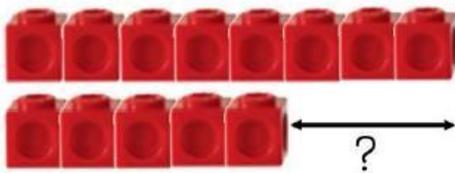

Children start with 6 and count back 2

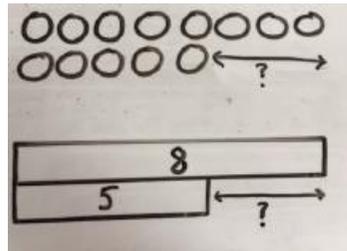

Finding the difference

Use cubes, Numicon or Cuisenaire rods, other objects etc.

Calculate the difference between 8 and 5.

Children to draw the cubes/ other concrete objects which they have used, or use the bar model to illustrate what they need to calculate.

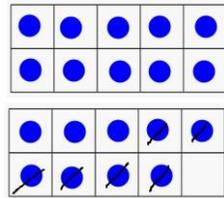

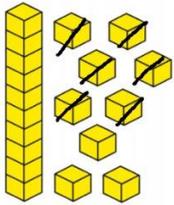

Find the difference between 8 and 5.

8 - 5, the difference is

Children explore why
 $9 - 6 = 8 - 5 = 7 - 4$ have the same difference

2 digit - 1 digit TO - O
Using tens frames or base 10

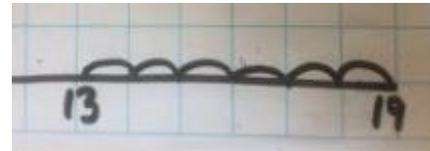

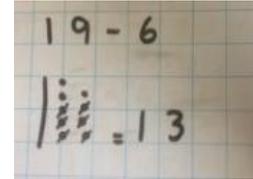

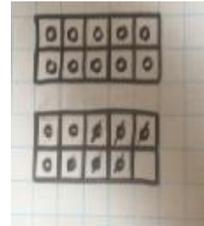

19 - 6

Children to represent the concrete using own drawings

FS - tens frame

KS1 - base 10

Children can also draw number lines

Explore and know that when subtracting units from tens and units number the tens will stay the same and the units will change.

19 - 6 = 13

27 - 4 = 23

48 - 7 = 41

Using fluency facts:

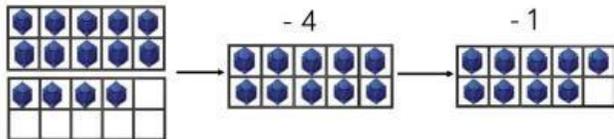

I know that.... 9 - 6 = 3

so I know that 29 - 6 = 23

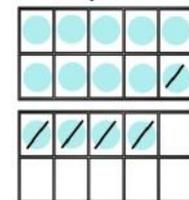

Making 10

Use ten frames

14 - 5

Children to represent the ten frame pictorially and discuss what they did to make 10 or bridge 10.

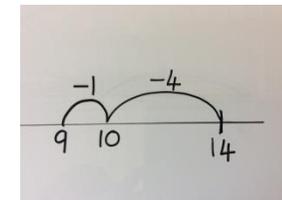

"14 - 4 = 10

10 - 1 = 9"

Children to show how they can make 10 by splitting the part they are subtracting (subtrahend.)

14 - 5 = 9

$$\begin{array}{r} / \quad \backslash \\ 4 \quad 1 \\ 14 - 4 = 10 \\ 10 - 1 = 9 \end{array}$$

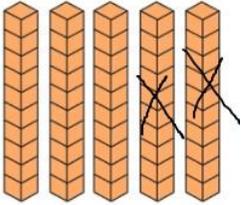

Tens - Tens

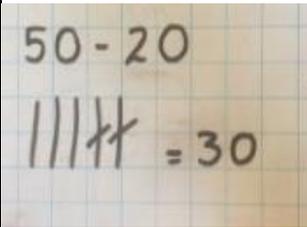

Use understanding of place value to support subtraction

$$50 - 20$$

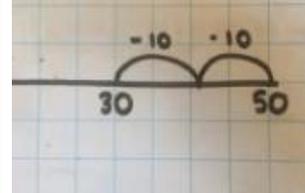

$$5 \text{ tens} - 2 \text{ tens} = 3 \text{ tens}$$

Children to represent the concrete using their own drawings

Children to draw jumps of 10 on number lines

Using fluency facts and place value to find answers.

$$50 - 20$$

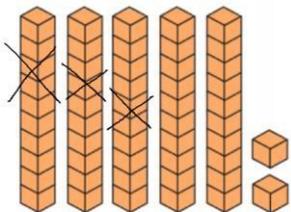

I know that $5 - 2 = 3$

So I know that $50 - 20 = 30$

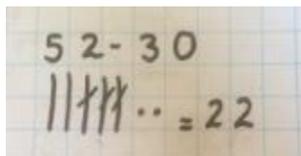

TO - Ts

Continue to develop understanding of partitioning and place value and use this to support subtraction

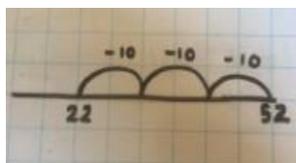

$$52 - 30 = 22$$

Children to represent the concrete using their own drawings

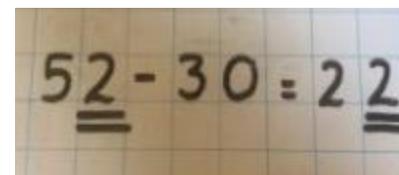

Children to draw jumps of 10 on number lines

Mental strategies: Counting back in 10s

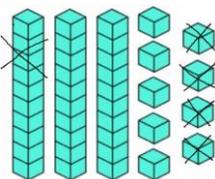

To know that when you subtract a tens number, the ones/ units digit stay the same.

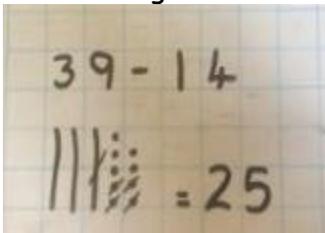

2 digit - 2 digit TO - TO begin with no bridging

Continue to develop understanding of partitioning and place value and use this to support subtraction use base 10, numicon and money

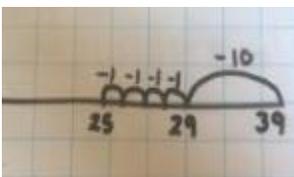

$$39 - 14$$

Children to represent the concrete using their own drawings

Children to draw jumps of 10 and 1 on number lines

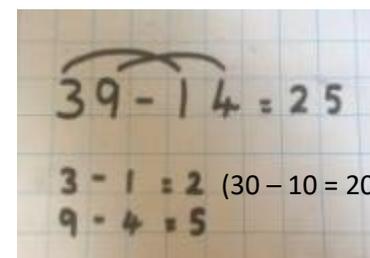

$$39 - 14$$

$$\begin{array}{r} \wedge \quad \wedge \\ 30 \ 9 \ 10 \ 4 \end{array}$$

$$30 - 10 = 20 \quad 9 - 4 = 5$$

Partition across the number sentence

('eyebrows' method)

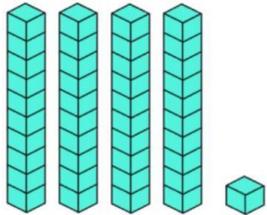

TO-O, TO - TO bridging

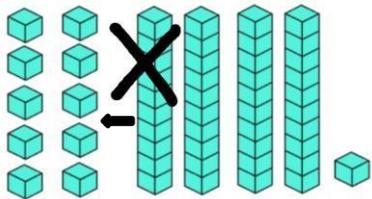

10

Using the exchange method

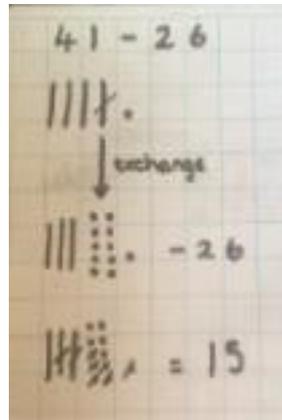

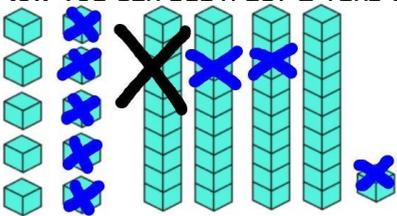

41 - 26

Do you have enough units to subtract 6 units?
No - you need to exchange a ten rod for 10 units.

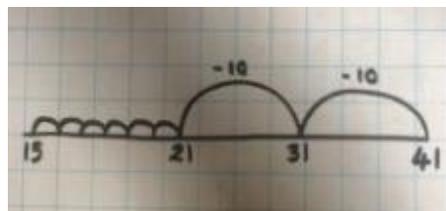

Now you can subtract 2 tens and 6 units

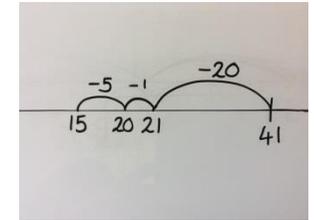

Children to represent the concrete using their own drawings

Children can also use number lines (this can simplify this process)

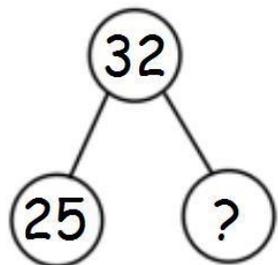

41 - 26
41 - 20 = 21
21 - 1 = 20
20 - 5 = 15

This becomes a mental strategy which relies upon previous mental strategies being fully understood. (Number bonds) The column method should not be used with two-digit numbers.

Conceptual variation; different ways to ask children to solve $32 - 25$

32	
25	?

Sam spent 32p, Tim spent 25p.
How much more did Sam spend?

Calculate the difference between
32 and 25.

$$= 32 - 25$$

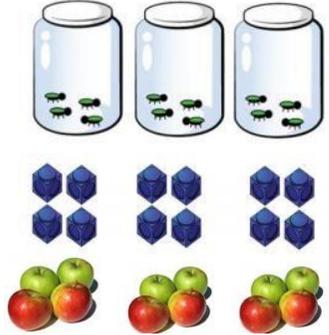

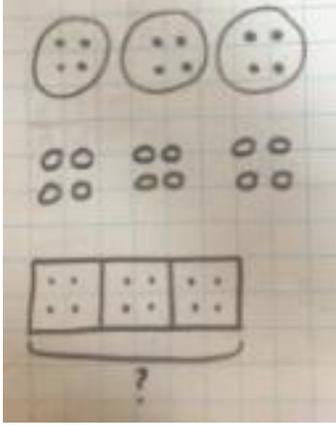

What is 25 less than 32?

Missing number calculations:

$$\underline{\quad} - 25 = 7$$

Multiplication

Key language which should be used: double, times, multiplied by, the product of, groups of, lots of, equal groups, repeated addition

<u>Concrete</u>	<u>Pictorial</u>	<u>Abstract</u>
<p>Repeated addition/ repeated grouping 3×4 $4 + 4 + 4$ There are three equal groups, with 4 in each group.</p>  <p>(This can also be presented in an array- without the focus being on the array itself)</p>	<p>Children to represent the practical resources in a picture and using a bar model.</p> 	<p>$3 \times 4 = 12$ $4 + 4 + 4 = 12$</p>

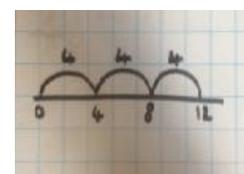

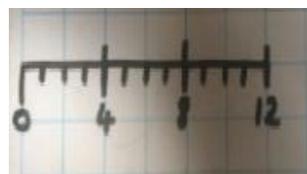

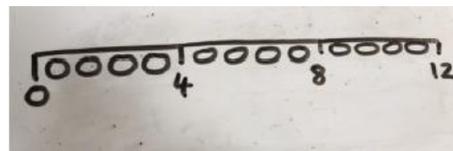

Number lines to show repeated groups

3×4

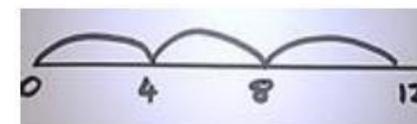

(Cuisenaire rods can be used too.)

Represent this pictorially alongside a number line e.g.

Abstract number line showing three jumps of four.

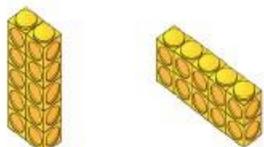

$3 \times 4 = 12$

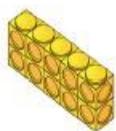

Use arrays to illustrate commutativity

Use counters, pegs and boards and other objects

$2 \times 5 = 5 \times 2$

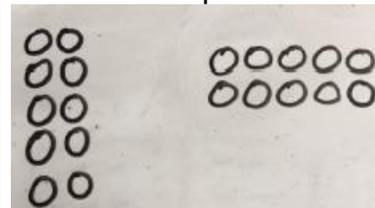

2 lots of 5

5 lots of 2

Children to represent the arrays pictorially.

Children to be able to use an array to write a range of calculations e.g.

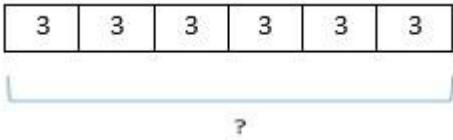

$10 = 2 \times 5$

$5 \times 2 = 10$

$2 + 2 + 2 + 2 + 2 = 10$

$10 = 5 + 5$

Conceptual variation; different ways to ask children to solve 6×3

There are 3 lollies in a bag. How many lollies are in 6 bags?

With counters show that $6 \times 3 = 18$

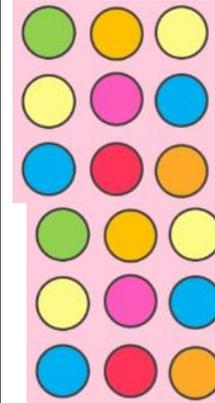

$6 \times 3 = \square$

$\square = 6 \times 3$

Find the total of 6 groups of 3

What is 6 multiplied by 3?

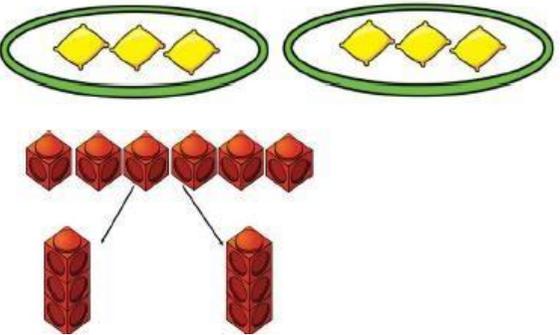

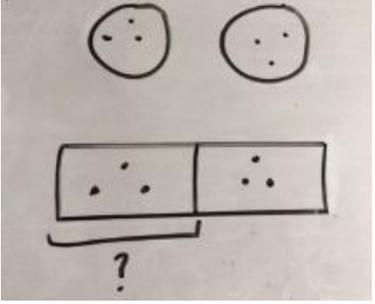

What is the calculation?
What is the answer?

How many number sentences can you write for this array?

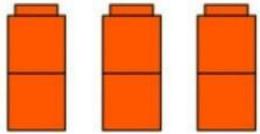

Division

Key language which should be used: share, group, divide, divided by, half, how many in.

<u>Concrete</u>	<u>Pictorial</u>	<u>Abstract</u>		
<p>Sharing Use a range of objects. $6 \div 2$ 6 shared equally into 2 groups</p>  <p>The concrete representation shows two groups of three yellow diamonds, each group enclosed in a green oval. Below this, six red cubes are arranged in a horizontal row. Two lines extend from the ends of this row down to two separate vertical columns of three red cubes each, illustrating the sharing of six objects into two equal groups of three.</p>	<p>Represent the sharing pictorially.</p>  <p>The pictorial representation shows two circles, each containing three dots. Below the circles is a rectangle divided into two equal halves, with three dots in each half. A bracket underneath the entire rectangle is labeled with a question mark, representing the problem of dividing six objects into two equal groups.</p>	<p>$6 \div 2 = 3$</p> <table border="1" data-bbox="1489 454 1881 518"> <tr> <td>3</td> <td>3</td> </tr> </table> <p>Children should also be encouraged to use their 2 times table facts.</p> <p>$2 \times 3 = 6$ $6 \div 3 = 2$ $6 \div 2 = 3$</p>	3	3
3	3			

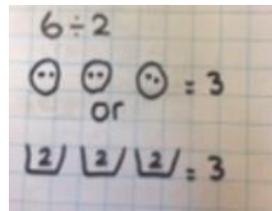

Grouping

Use a range of objects

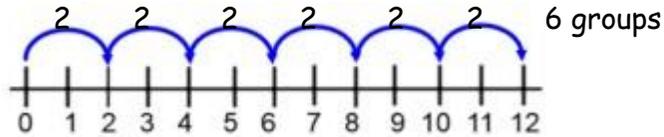

2 4 6

$6 \div 2$ - how many groups of 2 are there in 6?

Children to represent groups pictorially

Grouping can also be drawn on a number line $12 \div 2$

Count in groups

$6 \div 2$ count in 2s 2, 4, 6 = 3 groups

$12 \div 2$ count in 2s 2, 4, 6, 8, 10, 12
= 6 groups

$20 \div 5$ count in 5s 5, 10, 15, 20 = 4 groups

Conceptual variation; different ways to ask children to solve $12 \div 4$

Share 12 into 4 equal groups

How many groups of 4 are in 12?

What is 12 divided by 4?

I have 12 strawberries and share them equally between 4 children. How many strawberries does each child have?

12 glue sticks need to be put into 4 pots. How many will be in each pot?

$$12 \div 4 \quad \square$$

$$=$$

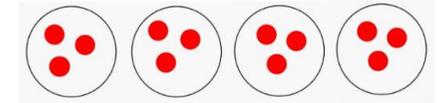

$$\square \quad = 12 \div 4$$

Can you write a division and a multiplication number sentence

about this box of chocolates?

What is the division number sentence for this drawing?

Or this picture?
